---

## EDUCATION

### University Of South Carolina

B.S in Computer Science

President's list recipient: Spring 2020 – Fall 2020

Aiken, SC

August 2017 - May 2021

---

## EXPERIENCE

### Amazon

Support Engineer

CA (Remote)

February 2022 - Present

- Daily responsibilities include analyzing problematic areas, solving them by generating **Python** scripts and contributing towards the procedure of transforming current processes towards automation
- Maintaining relevant documentation on **Quip** for the existing services and interacting with **Asana** software, to maintain and update the assigned tasks as per **Agile methodology**
- Execution of pre-defined SOPs using **AWS services** (DynamoDB, S3, Lambda functions) to support Amazon business and technical requirements.

### Waymo

Software Associate

Mountain View, CA

September 2021 - February 2022

- Triage in simulation software, such as Webviz, in various scenarios including Exploratory testing, and Edge cases evaluating Risk Metrics and Sim Agent Triage.
- Compiled and reported software QA metrics and trends to engineering teams for ensuring all software quality findings were documented, monitored to closure, and escalated when required

### Blingy

Back-End Developer Intern

San Francisco, CA

August 2021 - October 2021

- Explored firebase technology and uploaded data of 1000 products to the firebase real time database
- Presented progress report of current back-end products during monthly company meetings and interacted with **JIRA** software, to maintain and update the assigned tasks as per **Agile methodology**

### Computer Science Department, University of South Carolina

Software Developer Intern

Aiken, SC

January 2020 - April 2020

- Assisted in web projects for the college website using technologies such as **HTML** and **CSS**
  - Implemented a student ID card reader application which stores the collected information in local folder using **C#** and **Visual Studio IDE**
- 

## ACADEMIC PROJECTS

### Personal Planner

**Technologies:** Java & Spring Framework

- Implemented a backend service for a personal planner where events can be created and viewed using **REST API** and HTTP protocols. Developed an API for the personal planner with **Java** and **Spring** (Spring Boot) Framework

### 3D Graphic Animation

**Technologies:** C++ & OpenGL Libraries

- Implemented a 3D graphic design animation imitating an interrelation between a rocket and the moon by using **C++** programming language and **OpenGL** libraries. User can interact with this animation through mouse, keyboard keys, and context menu

### Capstone Project with NovaTech, LLC

**Technologies:** C# & .NET Framework

- Gathered project requirements and deliverables for developing building blocks for the company software. Designed and developed the user interface using **C#.NET** for the application by collaborating with team members.

### Standard Calculator

**Technologies:** Python & IDLE

- Developed a standard calculator using **Tkinter** framework in **Python** programming language, which contains arithmetic features as addition, subtraction, division, multiplication for integers and decimal numbers
- 

## SKILLS

- Programming Languages: C++, C#, Java, Python, HTML, CSS, JavaScript
- Tools: Microsoft Office Suite, Google Suite, GitHub, Slack, JIRA, Quip, Asana
