---

## EDUCATION

### University Of South Carolina

*B.S in Computer Science*

President's list recipient: Spring 2020 – Fall 2020

**Aiken, SC**

*August 2017 - May 2021*

---

## EXPERIENCE

### Amazon

*Technical Support Technician*

**CA (Remote)**

*February 2022 - Present*

- Daily responsibilities include analyzing problematic areas, solving them by generating **Python** scripts and contributing towards the procedure of transforming current processes towards automation
- Maintaining relevant documentation on **Quip** for the existing services and execution of pre-defined SOPs to support Amazon business and technical requirements. Interacted with **Asana** software, to maintain and update the assigned tasks as per **Agile methodology**

### Waymo

*Software Associate*

**Mountain View, CA**

*September 2021 - February 2022*

- Triage in simulation software, such as Webviz, in various scenarios including Exploratory testing, and Edge cases evaluating Risk Metrics and Sim Agent Triage.
- Compiled and reported software QA metrics and trends to engineering teams for ensuring all software quality findings were documented, monitored to closure, and escalated when required

### Blingy

*Back-End Developer Intern*

**San Francisco, CA**

*August 2021 - October 2021*

- Explored firebase technology and uploaded data of 1000 products to the firebase real time database
- Presented progress report of current back-end products during monthly company meetings and interacted with **JIRA** software, to maintain and update the assigned tasks as per **Agile methodology**

### Computer Science Department, University of South Carolina

*Software Developer Intern*

**Aiken, SC**

*January 2020 - April 2020*

- Assisted in web projects for the college website using technologies such as **HTML** and **CSS**
  - Implemented a student ID card reader application which stores the collected information in local folder using **C#** and **Visual Studio IDE**
- 

## ACADEMIC PROJECTS

### Personal Planner

**Technologies:** *Java, Spring and Maven*

- Implemented a backend service for a personal planner where events can be created and viewed using **REST API** and HTTP protocols. Developed an API for the personal planner with **Java** and **Spring** (Spring Boot) Framework

### 3D Graphic Animation

**Technologies:** *C++ Language and OpenGL Libraries*

- Implemented a 3D graphic design animation imitating an interrelation between a rocket and the moon by using **C++** programming language and **OpenGL** libraries. User can interact with this animation through mouse, keyboard keys, and context menu

### Capstone Project with NovaTech, LLC

**Technologies:** *C# Language and .NET Framework*

- Gathered project requirements and deliverables for developing building blocks for the company software. Collaborated with team members to developed the user interface using **C#.NET** for the application
- 

## SKILLS

- Programming Languages: C++, C#, Java, Python, HTML, CSS, JavaScript
- Tools: Microsoft Office Suite, Google Suite, GitHub, Slack, JIRA, Quip, Asana
