EXPERIENCE

Amazon   **CA (Remote)**
Support Engineer   *February 2022 - Present*
- Daily responsibilities include analyzing problematic areas, solving them by generating **Python** scripts and contributing towards the procedure of transforming current processes towards automation
- Maintaining relevant documentation on **Quip** for the existing services and interacting with **Asana** software, to maintain and update the assigned tasks as per **Agile methodology**
- Execution of pre-defined SOPs using **AWS services** (DynamoDB, Lambda functions) to support Amazon business and technical requirements

Waymo   **Mountain View, CA**
Software Associate   *September 2021 - February 2022*
- Triage in simulation software, such as Webviz, in various scenarios including Exploratory testing, and Edge cases evaluating Risk Metrics and Sim Agent Triage.
- Compiled and reported software QA metrics and trends to engineering teams for ensuring all software quality findings were documented, monitored to closure, and escalated when required

Blingy   **San Francisco, CA**
Back-End Developer Intern   *August 2021 - October 2021*
- Explored firebase technology and uploaded data of 1000 products to the firebase real time database
- Presented progress report of current back-end products during monthly company meetings and interacted with **JIRA** software, to maintain and update the assigned tasks as per **Agile methodology**

Computer Science Department, University of South Carolina   **Aiken, SC**
Software Developer Intern   *January 2020 - April 2020*
- Assisted in web projects for the college website using technologies such as **HTML** and **CSS**
- Implemented a student ID card reader application which stores the collected information in local folder using **C#** and **Visual Studio IDE**

ACADEMIC PROJECTS

Personal Planner   **Technologies:** *Java, Spring and Maven*
- Implemented a backend service for a personal planner where events can be created and viewed using **REST API** and HTTP protocols. Developed an API for the personal planner with **Java** and **Spring** (Spring Boot) Framework

3D Graphic Animation   **Technologies:** *C++ and OpenGL Libraries*
- Implemented a 3D graphic design animation imitating an interrelation between a rocket and the moon by using **C++** programming language and **OpenGL** libraries. User can interact with this animation through mouse, keyboard keys, and context menu

Capstone Project with NovaTech, LLC   **Technologies:** *C# and .NET Framework*
- Gathered project requirements and deliverables for developing building blocks for the company software. Collaborated with team members to developed the user interface using **C#.NET** for the application

EDUCATION

University Of South Carolina   **Aiken, SC**
B.S in Computer Science   President's list recipient: Spring 2020 – Fall 2020

SKILLS

- Programming Languages: C++, C#, Java, Python, HTML, CSS, JavaScript
- Tools: Microsoft Office Suite, Google Suite, GitHub, Slack, JIRA, Quip, Asana
