EXPERIENCE

Software Engineer

February 2023 – Present

TabaPay

Palo Alto, CA

- Developed validation schemas that strengthened DataVisor's AI-driven fraud detection accuracy by 20%, sharpening performance across Money Services Business (MSB) scenarios
- Engineered a Golang-based PII data masking engine supporting 10+ file formats, automating sensitive data obfuscation across production payment workflows
- Reduced audit documentation effort by 50% with a Python-based AWS GuardDuty log parser that automated security event log ingestion for anomaly detection and compliance reporting
- Designed and delivered customer-specific operational dashboards by querying 10M+ row datasets in AWS Redshift, cutting support investigation time and enabling faster, data-driven decision-making
- Achieved 40% improvement in log visibility by architecting an end-to-end Splunk observability stack with anomaly detection and PCI-DSS compliance dashboards
- Integrated Atlassian Status Page and JIRA REST APIs into the operations portal, reducing mean time to communicate incidents by 25%

Software Engineer

March 2022 – February 2023

Amazon AGS (via Collabera)

Remote

- Built a Selenium automation framework to validate merchant listings by product ID across mall locations, auto-capturing screenshot evidence and cutting manual QA effort by 20%
- Reduced change management overhead by 30% by engineering a Python automation script to populate template metadata, standardizing SOP-aligned workflows

Software Development Engineer in Test

September 2021 – March 2022

Google (via Artech)

Mountain View, CA

- Performed manual, exploratory, regression, and functional test cycles for Google's autonomous vehicle (Waymo) software systems, reducing bug occurrence by 20% and accelerating validation timelines
- Executed simulation analysis and functional validation across 10+ Waymo test scenarios, ensuring behavioral accuracy and compliance with established safety and quality procedures

PROJECTS

Bug Report Triage AI Agent | *Python, FastAPI, Pydantic, GitHub Actions* | [GitHub](#)

May 2026 – Present

- Built and deployed an AI bug-triage agent via GitHub Actions that auto-classifies severity, applies labels, and detects duplicates on every new issue, eliminating repetitive triage work per report
- Cut time-to-first-response from ~1 hour to ~1 minute while operating at ~\$0.005 per issue
- Designed the system to run as a serverless GitHub Action with zero infrastructure to maintain

Smart Spend | *Node.js, Claude API, JavaScript* | [GitHub](#)

May 2026 – Present

- Architected and developed a privacy-first credit card analytics dashboard in Node.js, enabling secure, automated processing of financial statements without compromising user data
- Reduces financial waste through clear insights and automates analysis in ~2 minutes versus ~2 hours manually, resulting in significant time savings.
- Embedded a Claude AI chatbot to surface personalized financial insights and power context-aware, real-time customer interactions

TECHNICAL SKILLS

Languages & Frameworks: Golang, Java, C#, Python, SQL, JavaScript, Bash, FastAPI, Pydantic, REST APIs

Cloud & DevOps: AWS (Lambda, DynamoDB, Redshift), Docker, Kubernetes, GitHub Actions, CI/CD

AI & Domains: Claude API, GitHub Copilot, AI Agent Development, Payment Systems, PCI-DSS Compliance

Tools & Platforms: Git, GitHub, Jira, Confluence, Postman, Selenium, Splunk

EDUCATION

University of South Carolina Aiken

August 2017 – May 2021

Bachelor of Science in Applied Computer Science, GPA: 3.8/4.0 (Dean's List)

Aiken, SC
