SUMMARY

Software Engineer with 3+ years of experience building backend systems and AI-powered workflows across Google (Waymo), Amazon, and Tabapay. Brings a growth mindset and deep curiosity about GenAI to every layer of the stack, with a consistent bias toward shipping high-impact features in fast-paced, ownership-driven environments.

EXPERIENCE

Software Engineer

February 2023 – Present

Tabapay

Palo Alto, CA

- Debugged and triaged defects across newly released portal features by diagnosing root causes, documenting reproducible replication steps, and proactively synthesizing recurring bug patterns into structured product insights surfaced to product leadership, reducing recurring defect rate by 15%
- Designed and deployed a validation schema framework end-to-end using Claude Code, integrating with DataVisor's AI fraud detection pipeline to improve model accuracy by 20% across Money Services Business workflows
- Delivered scalable role-based REST APIs in Go (MySQL backend) powering multi-tier approval workflows using GitHub Copilot; conducted code reviews to enforce code quality and best practices
- Engineered a log parsing engine leveraging regex-driven pattern matching, eliminating manual log review workflows and cutting documentation effort by 50% across compliance reporting cycles
- Developed and delivered customer-specific reporting solutions against 10M+ row AWS Redshift datasets, driving a 20% reduction in mean investigation time through optimized SQL queries and data-driven workflows
- Owned end-to-end design and deployment of a Splunk observability stack from cross-functional requirements gathering, improving log visibility by 40% with automated anomaly detection and PCI-DSS compliance dashboards

Support Engineer

March 2022 – February 2023

Amazon

Remote

- Proactively identified a manual bottleneck across 500+ merchant locations and independently built an automation framework, from problem identification through deployment, auto evidence and eliminating 20% of verification overhead
- Reduced change management overhead by 30% by engineering an automation script to populate template metadata across 200+ weekly change requests, standardizing SOP-aligned workflows and accelerating deployment approvals

Software Development Engineer in Test

September 2021 – March 2022

Google

Mountain View, CA

- Embedded within Google's autonomous vehicle team (Waymo), reducing AV software defect escape rate by 20% by engineering multi-layered validation across manual, exploratory, regression, and functional test cycles by contributing to the reliability of production systems at scale
- Validated behavioral accuracy across 10+ Waymo autonomous driving scenarios through simulation analysis and functional test cycles, proactively expanding edge-case coverage and maintain compliance with safety standards

PROJECTS

Bug Report Triage AI Agent | *Python, FastAPI, Claude, GitHub Actions* | [GitHub](#)

- Designed and deployed an LLM-powered agentic triage system on GitHub Actions that autonomously classifies issue severity, detects duplicates, and routes incoming issues, engineering the full agentic workflow end-to-end from prompt design through evaluation, cutting time-to-first-response from 1 hr to 1 min at \$0.005/issue
- Built using Claude as the reasoning engine; applied prompt engineering techniques for edge-case severity classification and iterated on model behavior through an evaluation loop against a labeled test dataset, maintaining classification accuracy above 90% across issue categories

TECHNICAL SKILLS

Languages & Frameworks: Python, Golang, Java, C++, SQL, HTML, JavaScript, Bash, FastAPI, Pydantic

AI & GenAI: GenAI, LLM integration, Claude, Prompt engineering, AI Agent Development, Agentic workflows

Cloud & DevOps: AWS (Lambda, DynamoDB, Redshift), GitHub Actions, Splunk, Docker

Tools & Platforms: Git, GitHub, Jira, Postman, Code review, System design, Unit testing, Agile

EDUCATION

University of South Carolina Aiken

August 2017 – May 2021

Bachelor of Science in Applied Computer Science, GPA: 3.8/4.0 (Dean's List)

Aiken, SC
