EXPERIENCE

Software Engineer

February 2023 – Present

TabaPay

Palo Alto, CA

- Designed and maintained automated test suites in Python and Golang to validate AI-driven fraud detection workflows, improving ML model validation accuracy by 20% across critical Money Services Business (MSB) use cases
- Validated payment integrations end-to-end through REST API testing in Postman and Golang.
- Conducted root cause investigations on production incidents by analyzing 10M+ row datasets in AWS Redshift with SQL, surfacing defect patterns and reducing support investigation time
- Reduced audit documentation effort by 50% by developing a Python-based AWS GuardDuty log parser that automated security event validation and PCI-DSS compliance reporting
- Architected an end-to-end Splunk observability stack with anomaly detection dashboards, improving log visibility by 40% and enabling faster post-change validation after software releases
- Integrated Atlassian Status Page and JIRA REST APIs into the operations portal, reducing mean time to communicate incidents by 25%

Software Engineer

March 2022 – February 2023

Amazon AGS (via Collabera)

Remote

- Designed and scaled a Selenium-based test automation framework in Python to validate merchant listings by product ID across mall locations, auto-capturing screenshot evidence and reducing manual QA effort by 20%
- Reduced change management overhead by 30% by engineering a Python automation script to populate template metadata, standardizing SOP-aligned workflows

Software Development Engineer in Test

September 2021 – March 2022

Google (via Artech)

Mountain View, CA

- Executed functional, regression, and exploratory test cycles for Waymo's autonomous vehicle software systems, reducing bug occurrence by 20% and accelerating validation timelines
- Performed simulation-based functional validation across 10+ Waymo test scenarios, ensuring behavioral accuracy and compliance with established safety and quality procedures
- Triaged, reproduced, and prioritized defects in JIRA, partnering with engineering to drive root-cause resolution and adding regression coverage to prevent recurrence.

PROJECTS

Bug Report Triage AI Agent | *Python, Pydantic, FastAPI, GitHub Actions* | [GitHub](#)

May 2026 – Present

- Built and deployed an AI bug-triage agent via GitHub Actions that auto-classifies severity, applies labels, and detects duplicates on every new issue, eliminating repetitive triage work per report
- Cut time-to-first-response from ~1 hour to ~1 minute while operating at ~\$0.005 per issue
- Designed the system to run as a serverless GitHub Action with zero infrastructure to maintain

Smart Spend | *Node.js, Claude API, JavaScript* | [GitHub](#)

May 2026 – Present

- Developed a privacy-first credit card analytics dashboard that processes financial statements using Node.js
- Automated spend categorization and trend analysis, reducing processing time from ~2 hours to ~2 minutes
- Integrated a Claude AI chatbot for detailed customer interactions and personalized financial insights

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, Golang, SQL, Bash

Test Automation Frameworks: Selenium, REST API testing, Postman

Testing Types: Functional, Regression, Performance, Exploratory, Security/Compliance, Simulation-based validation

CI/CD & DevOps: Jenkins, GitHub Actions, AWS, Unix/Linux

Version Control: Git, GitHub

Tools: JIRA, Splunk, Postman, Jenkins, Zendesk, Atlassian Suite

EDUCATION

University of South Carolina Aiken

Aiken, SC

Bachelor of Science in Applied Computer Science, GPA: 3.8/4.0 (Dean's List)

August 2017 – May 2021
