EXPERIENCE

TabaPay

Application Analyst

Tech Stack: Go, SQL, AWS RedShift, Splunk, Unix/Linux, REST APIs, Zendesk, Jira

Palo Alto, California

February 2023-Present

- Designed and developed utility programs in **Go** to support internal payment processing systems and improve reliability of **production environments** and workflows.
- Integrated and maintained **REST APIs**, including Atlassian APIs, to track, display, and deliver client alerts on system status, improving operational health visibility for enterprise applications and accelerating issue awareness by 20%.
- Queried large datasets using **SQL** in AWS RedShift to generate customer-specific reports, perform **data analysis**, and support business decision-making through Tableau dashboards.
- Managed customer interactions and user management through **Zendesk**, supporting timely issue resolution, **case ownership**, and customer communication.
- Improved system log observability by 40% using **Splunk** anomaly detection alerts, enabling proactive identification of production risks, **monitoring system health**, and faster incident resolution.
- Investigated and **triated complex production support issues** through **Unix/Linux** log analysis, reproduced bugs, debugged failures, and partnered with engineering teams through resolution.
- Troubleshooted** production issues using **Splunk** logs, **SQL** queries, **JIRA** tickets, and internal support tools to identify root causes and drive issue resolution or escalation.
- Collaborated in incident investigations, cross-functional troubleshooting efforts, and production support escalations, maintaining issue ownership through resolution in alignment with the **Software Development Lifecycle (SDLC)**.

Amazon-AGS (Collabera)

Technical Support Technician

Tech Stack: Python, Unix/Linux, AWS

(Remote), California

March 2022-February 2023

- Provided technical support for backend operational systems by analyzing logs, troubleshooting **production issues**, and resolving customer-impacting incidents.
- Built **Python** automation scripts that reduced manual effort by 30% and improved process efficiency.
- Executed and maintained backend automation workflows in **Unix/Linux** environments to support scalable operations and **application support**.
- Developed a Selenium-based automation framework for web validation and **cross-browser testing**, improving process efficiency by 20%. Worked with AWS services (Lambda, DynamoDB) to support reliable backend workflows.

Google (Artech)

Software Quality Operations Associate

Mountain View, California

September 2021-March 2022

- Conducted **manual, exploratory, regression, and functional testing** for Google's autonomous vehicle software systems, reducing bug occurrence by 20%.
- Executed simulation analysis and functional validation to verify software behavior across multiple scenarios while adhering to **established testing procedures**.

PROJECTS

Smart Spend

Tech Stack: Go, Claude AI, MySQL | [GitHub](https://github.com)

- Built a custom expense analytics dashboard using Claude AI compute personal spending trends with category breakdowns using Go for parsing financial statements and storage using MySQL.
- Reduces financial waste through clear insights and automates analysis in ~2 minutes versus ~2 hours manually, resulting in significant time savings.

EDUCATION

University Of South Carolina Aiken

Bachelor of Science Degree in Applied Computer Science

Aiken, South Carolina

August 2017 – May 2021

SKILLS

- Programming Languages: Go, Python, SQL, Java, C++, C#, HTML, CSS, JavaScript
- Monitoring & Diagnostics: Log Analysis, Splunk Monitoring, Unix/Linux, Incident Investigation
- API & Systems: REST APIs, JSON, API Integrations, SQL
- Cloud & Tools: AWS (Lambda, DynamoDB, Redshift), Git, JIRA, Zendesk, Splunk, Tableau
